Maternal and Child Health Nursing Adele Pillitteri 2013-11-25
This highly respected book helps students develop the technical skills and broad understanding vital for effective practice while ensuring they never lose

sight of the importance of compassion in their role as nurses. Presenting maternal-newborn and child health care not as two separate disciplines but as a continuum of knowledge, **Maternal and Child Health Nursing, Seventh Edition** views the

experience of wellness and illness as family-centered events and pregnancy and childbirth as periods of wellness in a woman's life. Consistently linking theory with application to bring clinical concepts to life and using a nursing process framework to help students prepare for effective practice, this Seventh Edition adds new chapter-ending case studies, an expanded focus on culture and families, the latest QSEN content, and more. In addition, this edition is supported by PrepU's adaptive quizzing, DocuCare's educational electronic health record software, and a fully updated Study Guide.

Assessing the Driving Ability of the Elderly
Ellen D. Taira 1989 This much-needed book explores the extensive literature on assessing

the driving ability of the elderly and provides specific guidelines for practitioners working with the well and the frail older driver. As the number of elderly drivers increases, therapists are being called upon to evaluate drivers who have become physically, cognitively, or otherwise impaired but who wish to continue to drive. Motor vehicle departments are not always equipped to screen out potential hazardous drivers nor are other health professionals with only brief opportunities to assess function. This timely book features preliminary research studies of vital interest to occupational therapists on the driving ability of the elderly. Assessing the Driving Ability of the Elderly provides a general overview of the literature on elderly

drivers; reports the results of 21 screening instruments that test older persons visual, motor, and cognitive abilities related to driving; and examines the usefulness of a self-administered driving questionnaire and daily diary as a method of screening individuals for deficits that may affect driving performance. All instruments developed for these studies are included in this groundbreaking book.
