Feline Gastroenterology Fabio Procoli 2021-10-29T00:00:00+02:00 The aim of this book is to focus on problems unique to the feline alimentary tract in comparison to dogs and to discuss them in detail, but also to highlight areas where knowledge is lacking or can only be derived from comparison with other companion animal species or humans. Instead of being a comprehensive work of “all things GI” in the cat, this book aims to shine a light on topics that are novel, such as the microbiome or probiotics, and might not have been covered by other standard textbooks. This book focuses on “a medic’s perspective” on feline alimentary tract health, which starts with considering differential diagnoses in a structured way based on the most common

clinical signs. It also includes the invaluable input from other specialties we so often draw on in clinical practice, namely laboratory diagnostics, diagnostic imaging, clinical pathology and histopathology, and nutrition, which can be a particular challenge in cats. It also covers feline-specific infectious and neoplastic diseases. Appropriate methods for retrieving adequate samples from organs of the alimentary tract in cats are discussed, and a particular focus on the challenges of differentiating inflammation from neoplasia is present in several chapters. Small Animal Gastroenterology Jörg M. Steiner 2010-12-07 Dieses englischsprachige Buch ist ein Standardwerk zur Gastroenterologie bei Kleintieren. Das Autorenteam von über 30 international renommierten Spezialisten aus Europa und den USA liefert den State of the Art dieser Fachdisziplin.

Canine and Feline Skin Cytology Francesco Albanese 2016-11-29 This book discusses canine and feline skin cytology and the importance of this diagnostic tool in interpreting skin lesions. With more than 600 clinical and cytological color pictures, it explains the cytological patterns observed in all cutaneous inflammatory and neoplastic lesions in cats and dogs, as well as cutaneous metastasis of non-primary skin neoplasms. The first part of the book describes cell morphology and cytological patterns, providing an overview of the normal structure of the skin. In the second chapter, readers learn how to choose the best techniques for different types of lesions. Further chapters present the cytological findings in the main inflammatory and neoplastic skin diseases. By focusing on the macroscopic aspects of the lesions from which the cells are collected, it helps readers to interpret cytological specimens. The final chapter explores the cytology of cutaneous metastasis from internal organs or accessory glands. This book offers veterinary students and practitioners alike an essential diagnostic tool.

Handbook of Small Animal Gastroenterology Todd R. Tams 2003 This handy "how-to" guide provides a practical framework for diagnosis and treatment of common, small animal gastrointestinal disorders, filling the gap left by larger, encyclopedic references. It features a complete review of symptoms and diagnostic methods, descriptions of digestive tract disorders by organ system, and a series of sample GI cases. Logically organized into three easy-reference sections and expertly written by recognized specialists, this complete, expanded edition is a valuable clinical tool for primary care practitioners. The familiar handbook format, based primarily on organs of the gastrointestinal tract, offers quick access to key information. Coverage of symptoms, nutrition, and chronic and acute disorders presents a thorough discussion of gastroenterology. A new diagnostic modality (BIPS) is covered, detailing this useful technique for general practice applications. A glossary of GI drugs educates the reader on the most current terminology. The chapter on Enteral and

Parenteral Nutrition has been completely revised with several new illustrations, for a more complete discussion of this important topic. A new, complete chapter on Neoplasia, written by an expert oncologist, draws together all relevant discussions on neoplasia throughout the book into one comprehensive, coherent treatment.

Feline Emergency & Critical Care Medicine Christopher G. Byers 2021-10-15 T00:00:00+02:00 Successfully managing emergency patients and those with critical illness requires knowledge and skills often not adequately covered in veterinary school and veterinary technician/nurse training programs. Through this book, the Editors and Authors have created a comprehensive resource to use to grasp the issues and scope of problems inevitably encountered in clinical practice. The book's format is designed to allow readers to digest the broad range of topics inherent to feline emergency and critical care medicine. Each chapter begins with a Summary Section that details practical points about pathophysiology, clinical signs, diagnosis, and treatment, including algorithms that attempt to simplify a problem and point the reader in the right direction. Each chapter also has a Comprehensive Section that dives deeper into the topic at hand to satisfy those who appreciate detailed discussions about pathophysiology, diagnostic investigations, and evidence-based therapies. The book has 10 sections and 100 chapters with accompanying images and videos (<https://feline-eccbook.edizioniedra.com>).

Feline and Canine Infectious Diseases Rosalind M. Gaskell 1996 This book covers viral, bacterial, fungal, and parasitic infections in the dog and cat. The bulk of the book concentrates on two aspects – commonly encountered diseases, and diseases which are specifically infectious. However the "lesser" infections are mentioned briefly (key clinical signs, diagnosis, reference to further information) especially where they might affect the diagnosis of another disease. For each infectious agent a series of topics is introduced: the agent, pathogenesis, pathology, clinical signs, diagnosis, treatment, epidemiology, vaccination and control. In addition there are tables of differential diagnosis and vaccination.

Canine and feline nutrition and dietetics Debora Guidi 2021-03-11T00:00:00+01:00 The centrality of nutrition in the state of health of pets has emerged only in the recent years, both to prolong their life expectancy and

to prevent the onset of serious diseases such as obesity, diabetes mellitus or liver lipidosis. The goal of this book is that each veterinarian can clearly answer the questions that are most frequently asked by the owners: Which type of food to choose? How to navigate between the different products on the market? The text also provides real recipes to be proposed in synergy with the nutritional handbooks of various food manufacturers, to consciously choose and be able to compare the nutritional characteristics of different products on the market. Nutrition is a fundamental aspect in the relationship between owners and pets and for this reason the text also gives great importance to aspects related to behavior and alimentary disturbances on an emotional basis.
