Life-Span Developmental Psychology Paul B. Baltes 2013-09-11 Life-Span Developmental Psychology: Personality and Socialization presents papers on personality and socialization. The book discusses the history, theory, and psychological approaches of developmental psychology, with focus on socialization and personality development through the life span; personality dimensions; and theories of socialization and sex-role development. The text also describes the life-span perspective of creativity and cognitive styles; continuities in childhood and adult moral development revisited; and issues of intergenerational relations as they affect both individual socialization and continuity of culture. The interactional analysis of family attachments; social-learning theory as a framework for the study of adult personality development; person-perception research; and the perception of life-span development are also considered. The book further tackles the potential usefulness of the life-span developmental perspective in education; the strategies for enhancing human development over the life span through educational intervention; and some ecological implications for the organization of human intervention throughout the life span. Developmental psychologists, sociologists, gerontologists, and people involved in the study of child development will find the book invaluable.

Gregg Shorthand Series 90 -Trans. Tapes Gregg 1981-02-01 *Handbook of Intraindividual Variability Across the Life Span* Manfred Diehl 2014-12-08 Intraindividual variability (IIV) of human development and behavior across the entire life-span is explored in this new book. Leading researchers summarize recent findings on the extent, role, and function of IIV in human development with a focus on how, when, and why individuals change over time. The latest theoretical, methodological, and technological advances are reviewed. The book explores the historical and theoretical background and challenges of IIV research along with its role and function in childhood, adolescence, and adulthood. Edited to maximize consistency and accessibility, each chapter includes an introduction and a review of the research and most explore future directions, new theoretical developments, and conclusions and implications. Readers are shown that by focusing on the individual as a unit of analysis across different time scales, conditions, and situations, researchers can effectively demonstrate behavioral and developmental regularities at different points of the life-span. As such this book is a must have for anybody interested in IIV research. The book explores: -New designs and methods for the analysis of intensive repeated measures data. -The importance of real-time data for more time sensitive and ecologically valid measurements. -The role and function of intraindividual variability in behavior and development across the life-span -- from infancy to later life. -Numerous examples of how intraindividual variability research is conducted. -Topics and findings that are commonly treated in disparate bodies of literature from various disciplines. Part 1 provides a historical, conceptual, and methodological overview of the study of intraindividual variability (IIV). IIV during childhood and adolescence and its application in the investigation of development of language acquisition, infant-parent interactions, development of motor skills, cognitive development, mood regulation, and identity development are examined in Part 2. Part 3 focuses on IIV during adult development, including its use in neuropsychological functioning and attention and in personality development and mood regulation. IIV in the context of adults' health behavior is also reviewed. Part 4 examines the key issues and challenges of IIV research in human development such as whether IIV in adult development is an indicator of vulnerability or resilience, the association between short-term IIV and long-term developmental change, and multiple time-scale design and analysis. The volume concludes with a look at the future of intraindividual variation analysis. Intended for advanced students and researchers in developmental psychology across the life-span, social, personality, and health psychology, as well as sociology, family studies, gerontology, education, and medicine, interested in intraindividual variability of behavior and its role in human development, this book also serves as a text for graduate courses on longitudinal analysis, multilevel modeling, and/or (advanced) data analysis offered in these departments. Knowledge in human development or life course sociology and graduate-level statistics is recommended.

Life-span Development Leonie Sugarman 2004-03-01 This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

Several People Are Typing Calvin Kasulke 2021-08-31 A Good Morning America Book Club Pick! • A work-from-home comedy where WFH meets WTF. "An absurd, hilarious romp through the haunted house of late-stage capitalism."—Carmen Maria Machado, author of *In the Dream House* Told entirely through clever and captivating Slack messages, this irresistible, relatable satire of both virtual work and contemporary life is The Office for a new world. Gerald, a mid-level employee of a New York–based public relations firm has been uploaded into the company's internal Slack channels—at least his consciousness has. His colleagues assume it's an elaborate gag to exploit the new work-from-home policy, but now that Gerald's productivity is through the roof, his bosses are only too happy to let him work from . . . wherever he says he is. Faced with the looming abyss of a disembodied life online, Gerald enlists his co-worker Pradeep to help him escape, and to find out what happened to his body. But the longer Gerald stays in the void, the more alluring and absurd his reality becomes. Meanwhile, Gerald's colleagues have PR catastrophes of their own to handle in the real world. Their biggest client, a high-end dog food company, is in the midst of recalling a bad batch of food that's allegedly poisoning Pomeranians nationwide. And their CEO suspects someone is sabotaging his office furniture. And if Gerald gets to work from home all the time, why can't everyone? Is true love possible between two people, when one is just a line of text in an app? And what in the hell does the 'dusty-stick: emoji mean? In a time when office paranoia and politics have followed us home, Calvin Kasulke is here to capture the surprising, absurd, and fully-relatable factors attacking our collective sanity...and give us hope that we can still find a human connection.

Life-Span Developmental Psychology Nancy Datan 2013-10-22 Life-Span Developmental Psychology: Normative Life Crises is a compilation of papers that deals with various points of view between the academic perspective — studies in developmental psychology and applied perspective — and the practical efforts of social workers to help individual clients. Part III presents the normative life crises in the family circle covering topics such as parenthood, sex roles, depression, widowhood, and an example of situational stress. Executive Function Sandra A. Wiebe 2017-07-28 Executive Function: Development Across the Life Span presents perspectives from leading researchers and theorists on the development of executive function from infancy to late adulthood and the factors that shape its growth and decline. Executive function is the set of higher-order cognitive processes involved in regulating attention, thoughts, and actions. Relative to other cognitive domains, its development is slow and decline begins early in late adulthood. As such, it is particularly sensitive to variations in environments and experiences, and there is growing evidence that it is susceptible to intervention – important because of its link to a wide range of important life outcomes. The volume is made up of four sections. It begins with an overview of executive function's typical development across the lifespan, providing a foundation for the remainder of the volume. The second section presents insights into mechanisms of executive function, as provided by a variety of methodological approaches. The third and fourth sections review the current research evidence on specific factors that shape executive function's development, focusing on normative (e.g., bilingualism, physical activity, cognitive training) and clinically relevant (e.g., substance use, neurodegenerative disease) developmental pathways.

Life-Span Development and Behavior David L. Featherman 2014-01-14 This volume continues the tradition of the Life-Span Development Series, presenting overviews of research programs on a variety of developmental topics. Research and theory in life-span development have given increased attention to the issues of constancy and change in human development and to the opportunities for, and constraints on, plasticity in structure and function across life. Acknowledging the need for and existence of interconnection between age and developmental periods, it focuses on conditions for possibly discontinuous development that emerge at later periods. Contributors to this series are sensitive to the restrictive consequences of studying only specific age periods, such as old age, infancy, or adolescence. Each scholar attempts to relate the facts about one age group to similar facts about other age groups, and to move toward the study of transformation of characteristics and processes over the life span.
