Protest, Popular Culture and Tradition in Modern and Contemporary Western Europe

Ilaria Favretto 2017-04-10 Mock funerals, effigy parading, smearing with eggs and tomatoes, pot-banging and Carnival street theatre, arson and ransacking: all these seemingly archaic forms of action have been regular features of modern European protest, from the 19th to the 21st century. In a wide chronological and geographical framework, this book analyses the uses, meanings, functions and reactivations of folk imagery, behaviour and language in modern collective action. The authors examine the role of protest actors as diverse as peasants, liberal movements, nationalist and separatist parties, anarchists, workers, students, right-wing activists and the global justice movement. So-called traditional repertoires have long been described as residual and obsolete. This book challenges the conventional distinction between pre-industrial and post-1789 forms of collective action, which continues to operate as a powerful dichotomy in the understanding of protest, and casts new light on rituals and symbolic performances that, albeit poorly understood and deciphered, are integral to our protest repertoire.

Red Hood Elana K. Arnold 2020-02-25 A dark, engrossing, blood-drenched tale of the familiar

threats to female power—and one girl's journey to regain it. Five starred reviews greeted this powerful story from Elana K. Arnold, author of the Printz Honor winner *Damsel*. You are alone in the woods, seen only by the unblinking yellow moon. Your hands are empty. You are nearly naked. And the wolf is angry. Since her grandmother became her caretaker when she was four years old, Bisou Martel has lived a quiet life in a little house in Seattle. She's kept mostly to herself. She's been good. But then comes the night of homecoming, when she finds herself running for her life over roots and between trees, a fury of claws and teeth behind her. A wolf attacks. Bisou fights back. A new moon rises. And with it, questions. About the blood in Bisou's past, and on her hands as she stumbles home. About broken boys and vicious wolves. About girls lost in the woods—frightened, but not alone.

Marginalised Communities in Higher Education Neil Harrison 2021 "Drawing on examples from nine countries across five continents, this book offers anyone interested in the future of higher education the opportunity to understand how communities become marginalised and how this impacts on their access to learning and their ability to thrive as students. Focusing on groups that suffer directly through discriminatory practices or indirectly through distinct forms of sociocultural disadvantage, this book brings to light communities about which little has been written and where research efforts are in their relative infancy. Each chapter documents the experiences of a group and provides insights that have a wider reach and gives voice to those that are often unheard. The book concludes with a new conceptualisation of the social forces that lead to marginalisation in higher education. This cutting-edge book is a must read for higher education researchers, policy makers, and students interested in access to education, sociology of education, development studies, and cultural studies"--

Food for Thought Simona Stano 2021-10-20 This volume offers new insights into food and culture. Food habits, preferences, and taboos are partially regulated by ecological and material factors - in other words, all food systems are structured and given particular functioning mechanisms by specific societies and cultures, either according to totemic, sacrificial, hygienic-rationalist, aesthetic, or other symbolic logics. This provides much "food for thought". The famous expression has never been so appropriate: not only do cultures develop unique practices for the production, treatment and consumption of food, but such practices inevitably end up affecting food-related aspects and spheres that are generally perceived as objectively and materially defined. This book explores such dynamics drawing on various theoretical approaches and analytical methodologies, thus enhancing the cultural reflection on food and, at the same time, helping us see how the study of food itself can help us understand better what we call "culture". It will be of interest to anthropologists, philosophers, semioticians and historians of food.

Read My Lips Debby Herbenick 2011-11-16 Many, if not most, people remain in the dark about the actual workings of the vagina and vulva. The primary purpose of Read My Lips is to educate women and men about the vulva and vagina in a manner that is smart, informative, and entertaining. Readers, both women and men alike, will come to think differently about women's genitals and become a little more curious and a lot more comfortable with them. They will learn more about the female body in terms of health, sex, pleasure, culture, and art. Though based on sound scientific and medical research, Read My Lips is accessible to the masses, so women and men who are curious about the clitoris, Brazilian waxing, labiaplasty, or whether the G-spot really exists, will find something of interest in these pages. Chapters focus on sex and the

vulva/vagina which, in spite of the many interesting cultural and historical aspects of vulva and vagina lore, remains of central interest to many people - as it should, given that women's genitals, and how they work, especially in regard to sex, remain a mystery to so many well-intentioned lovers. In keeping with the overall theme of celebration and education, the authors take a sex-positive, pleasure-focused perspective on women's genitals, pointing out the parts that can help women to enjoy sex and feel more comfortable in their own bodies. Tips on technique will also be shared alongside information on vaginal health.

Special Relativity for Beginners Jürgen Freund 2008 This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions.
